Tags: [logo](#) [statue](#) [game](#) [minecraft](#) [tribute](#)

My tribute to all creators of these vast Minecraft worlds... and their (our) children. ;) Designed from scratch in Fusion 360. NO glue or supports needed!

Print instructions

Print all letters (0.1 or 0.15mm layers) once, 9 pegs (pins), and one grass platform (0.2 layers are OK here). If you want to have a dual colour platform like on the picture, change filament cca on the layer 9.4mm off the printer's bed (from brown to green material).

No scaling down on FDM/FFF 3D printers with 0.4mm nozzles is recommended. The model fits perfectly as designed.
